

Adobe Walls Gin - Spearman, TX

Ginning in the Northern Panhandle of Texas

Based out of Edmondson, Texas, the Windstar group has been pursuing quality cotton ginning since 1978 and its newest venture is no exception. Adobe Walls Gin, located in Spearman, Texas was made possible through the mutual efforts of Windstar and several local investors. This is the sixth ginning operation to join the Windstar family. The gin is a 4 - 170 plant equipped with a Samuel Jackson Collider Drying System (left). Adobe's Collider System utilizes 14-Series heaters with SimpleShed Technology for the ultimate in fuel efficiency.

The Steamroller System (right) uses a Humidaire Southwest for moist air generation. The Southwest is a new generation Humidaire with Moisture Tunnel Technology. It allows Adobe to optimize moisture restoration even at very high ginning capacities. While the Southwest's maximum moisture generation of 4 gallons per minute is impressive, the guys at Adobe also appreciate its 10% increase in fuel efficiency over previous Humidaire Units.

Jerrell Key (left) is the manager at Adobe Walls Gin. Jerrell says, "Our team continues to improve the performance of the gin. Our focus is on quality ginning and efficient operation." Adobe should gin approximately 50,000 bales in the 06-07 season.
