

MINI AIR TOOLS PACKAGE

An affordable option for monitoring the most essential points in your air systems.

Air Tools allows you to 'See Your Air' in your gin. Mini Air Tools gives you a price and scale that's perfect for any gin's comfort level.

The 8-inch color touch screen is easy to read and use.

Each channel can be 'zoomed in' to see short term graphs and setup.

Unlike normal air measurement devices which require specialized knowledge and lots of practice, Air Tools are suitable for beginners and experts alike.

Air Tools lets you 'See Your Air' in your own operation without leaving your console. Mini Air Tools is a scaled down version of the full system that includes everything you need to measure static pressure at six different points. The six points can be used anywhere there is air flow such as the drying system, lint cleaners, cyclone banks, etc.

When air flow is in an acceptable range, the indicator will point to the user-defined green area. As changes in air flow occur, the yellow area provides a warning indicator light to the ginner and the red area is an alarm that can be used for a control action. Chokes can easily cost thousands of dollars per hour in expensive down time. If not costly chokes, hidden air problems can cripple system performance, eating away at your profitability. Mini Air Tools will save you money by letting you know the moment your air systems are not at peak performance. That's the best time to do something about it.
