

# HOT BOX III

Invented in 1987 and only recently on its third model, upgrades don't come along often for the Hot Box. When they do, you can bet our engineers think long and hard about making changes to a product with over 200 successful installations around the world.

It's been said that it is easy to make something complicated...what's hard is keeping it simple. Our design team takes that to heart, so we made sure the Hot Box III was just as ginner-friendly as the previous model.

The Hot Box III offers all the things you love about the Hot Box II, plus the features you've always wanted, including those featured on the right.

\* The Hot Box III Upgrade Kit fits most Hot Box IIs. Consult the factory for details.

## Field Notes

This new design minimizes costly air leakage

The new trash gate design is resistant to jamming and the problems that causes

Adjustable design accomodates conveyer variations better

Designed in the summer of 2009

Field tested in the fall of 2009 on six installations

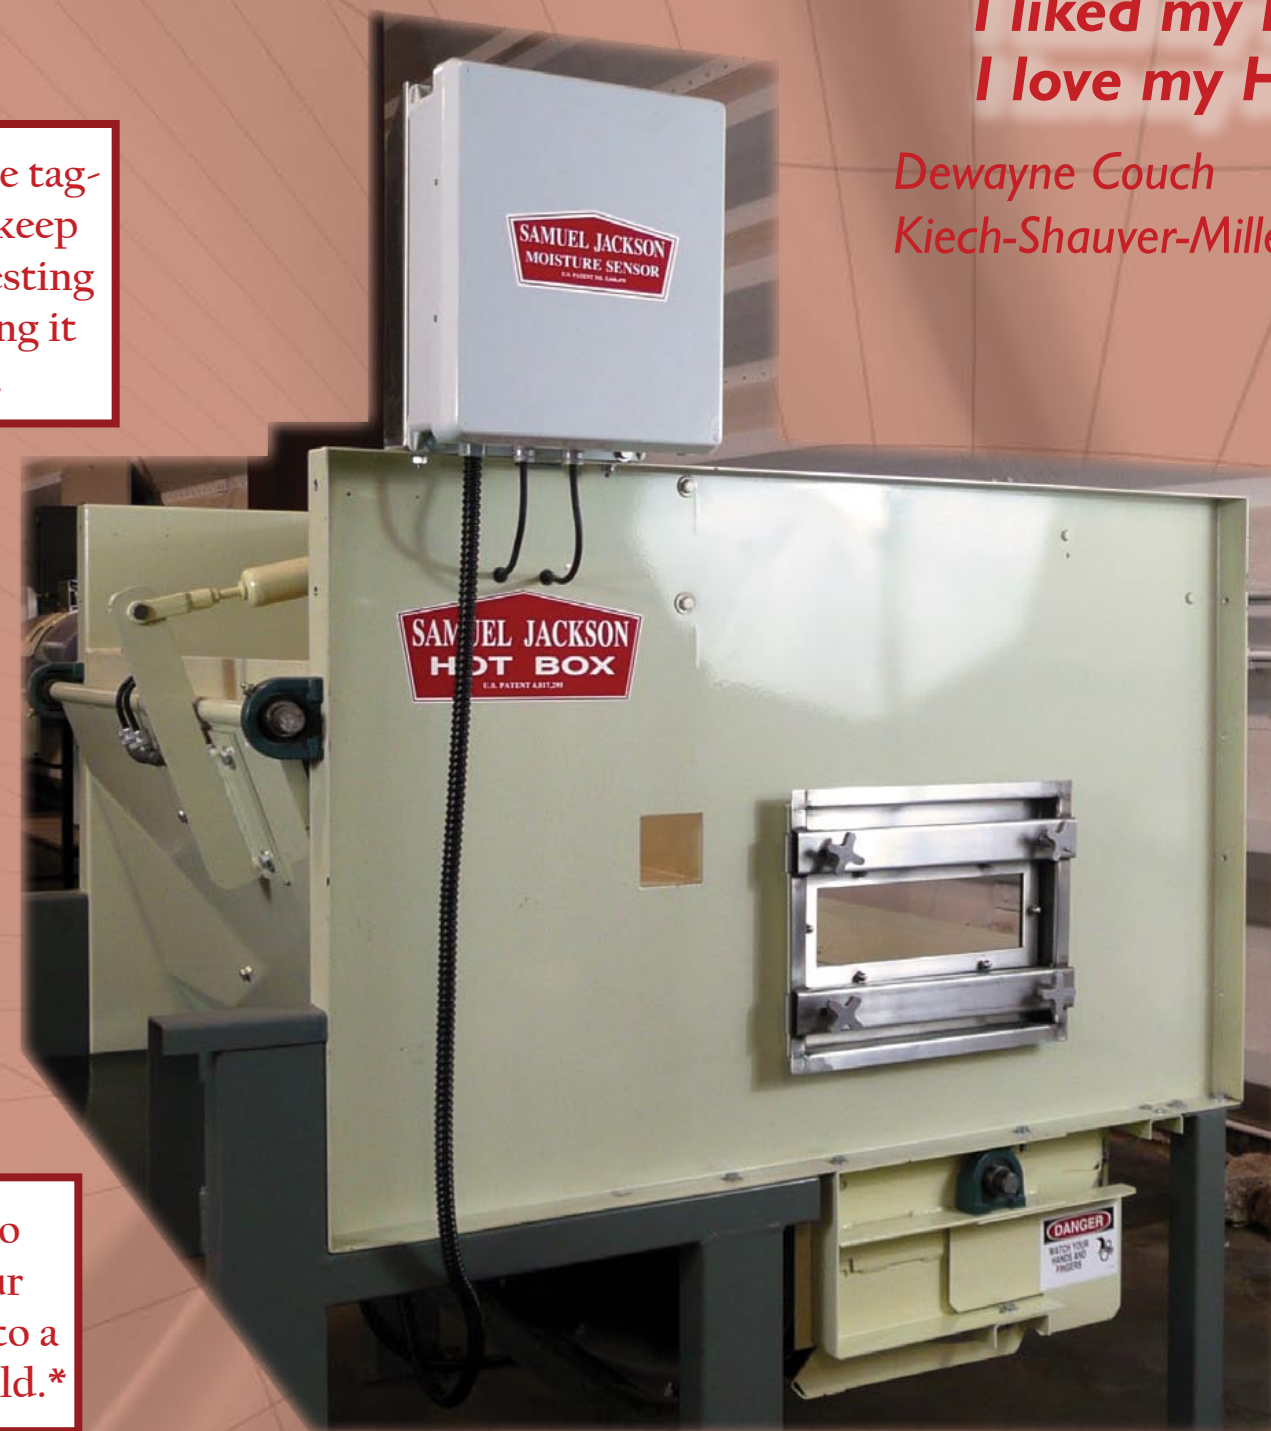

No vaccuums to power or maintain

Improved junk separation

**What's the difference between the Hot Box II and the III?  
I liked my Hot Box II.  
I love my Hot Box III.**

*Dewayne Couch  
Kiech-Shauver-Miller Gin, Monette, AR*

Specially designed to be tag-free, inlet door stops keep the heavy door from resting on your belt, protecting it when fans are off.

Improved trash gate seal and scroll to minimize jams from small rocks. The new seal is reversible when one edge becomes damaged.

100% heavier trash gate structural components made of plate steel instead of sheet metal used on earlier Hot Boxes.

A kit is available to easily upgrade your existing Hot Box II to a Hot Box III in the field.\*

Adjustable panels to reduce air leakage where the Hot Box III meets the belt conveyor.

The trash gate has a 25% larger opening and a more aggressive angle to remove green bolls, trash, rocks and junk.
